

Commitment.

It started out simply, with commitment to a goal.

It all started with a singular goal: **support the inpatient rehabilitation field**. We focused to understand our IRF partners, we worked hard, and in 2002 eRehabData started the first online national outcomes system.

Out of our commitment to the industry evolved our core objectives: To empower users with easy, secure access to their data; to offer personal, friendly customer support; and to set the standard with innovative reports and features.

eRehabData's easy-to-use, hassle-free software really goes the distance, helping facilities with accurate compliance and management decision support. Our users:

- ▶ Get sophisticated IRF-PAI analytics
- ▶ Design customized report templates
- ▶ Build census with Referrals Tracking and a robust Pre-Admission Screening system with offline and notification features

Get on track with other hard-working, conscientious IRFs.
